

FireFox® accessories

FireFox® 2 – protective cover

An additional **protective cover** over the head ensures that the stroke length setting is not unintentionally changed. Another **protective cover with ring*** ensures an additional protection against the adjustment of the force adjustment. (* Advice and delivery time on request)

Protective cover

Part no. 772 1194

FireFox® 2 – Equipped with a complete set of nosepieces and threaded mandrels in a plastic carrying case

Ready for use and neatly stored

Complete metric threaded mandrel and nosepiece set M3 to M12

Metric dimensions

UNC/UNF dimensions

Part no. 772 1142

Tool mount for FireFox® 2

For integration into automated systems or connection to handling modules

Part no. 772 1322

FireFox® 2 C

Available from end of 2013

Advice and delivery time on request

FireFox® 2 C – With setting process monitoring

This tool is based on the proven TAURUS® C model. Here the setting process is analysed via integrated electronics using stroke and force sensors. The user can define an OK window by means of a special software. A coloured LED on the tool shows the results of the setting process monitoring which can also be recorded and processed via data line.

Applications

In the serial production of safety component parts as well as in automated setting processes the FireFox® C allows checking and documentation of the setting process.

Advantages

- High process safety
- Documentation of each individual setting process
- Less scrap since errors can be immediately identified
